

Snow Gloves OS

You keep the decisions.

A senior team that drafts. You send, spend, and publish.

Snow Gloves OS runs your operations as if a dedicated team is watching it 24/7. They gather the context, prepare the drafts, and cue up the actions. Your job is simply to review, approve, and guide.

The System

You

Your First Hour

Step 1: Install
(Get the app running)

Step 2: Pick a runtime
(Choose your AI colleague)

Step 3: The Interview
(Tell us about the company)

Step 4: One Skill
(Turn on your first capability)

Get the engine running.

```
$ git clone https://github.com/Sheshiyar/snow-gloves-os.git  
$ cd snow-gloves-os  
$ ./scripts/install.sh
```

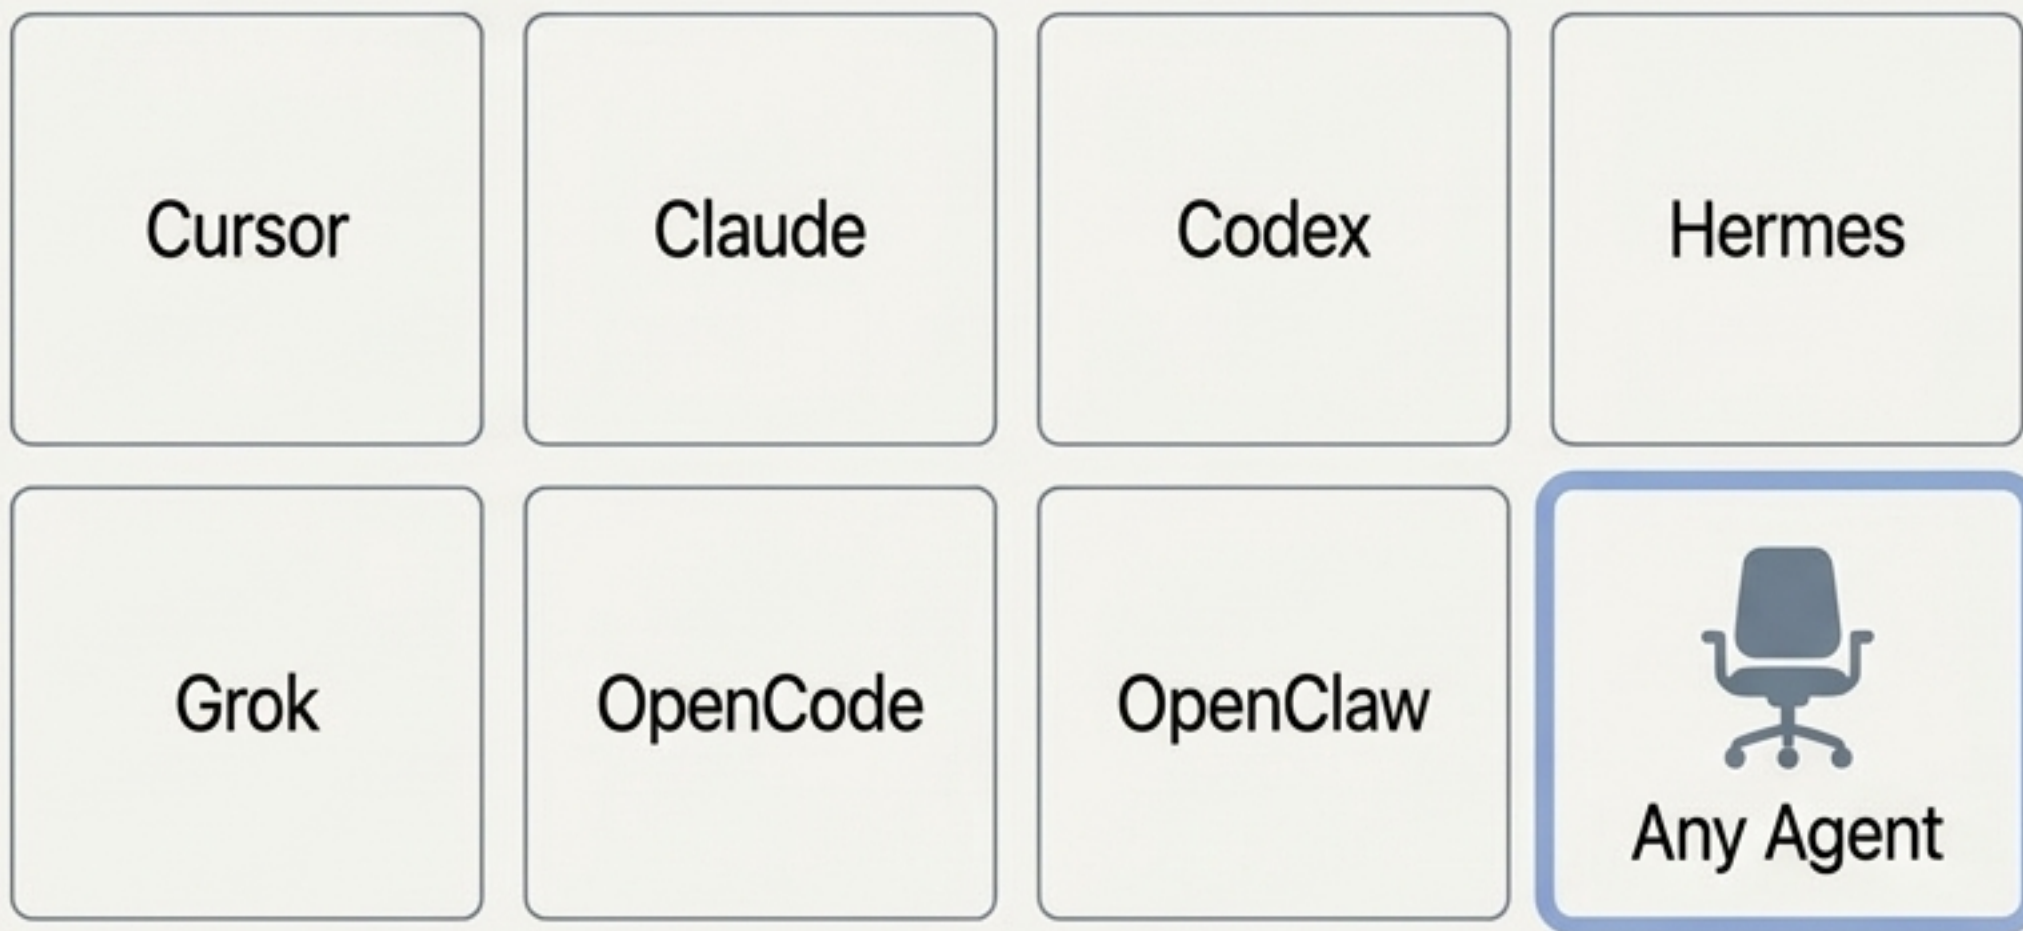

Or, use the optional desktop wizard for a guided setup.

Note on v0.2.0: This is a brand new app. If you are coming from 0.1.x, you must reinstall fresh from the DMG/MSI.

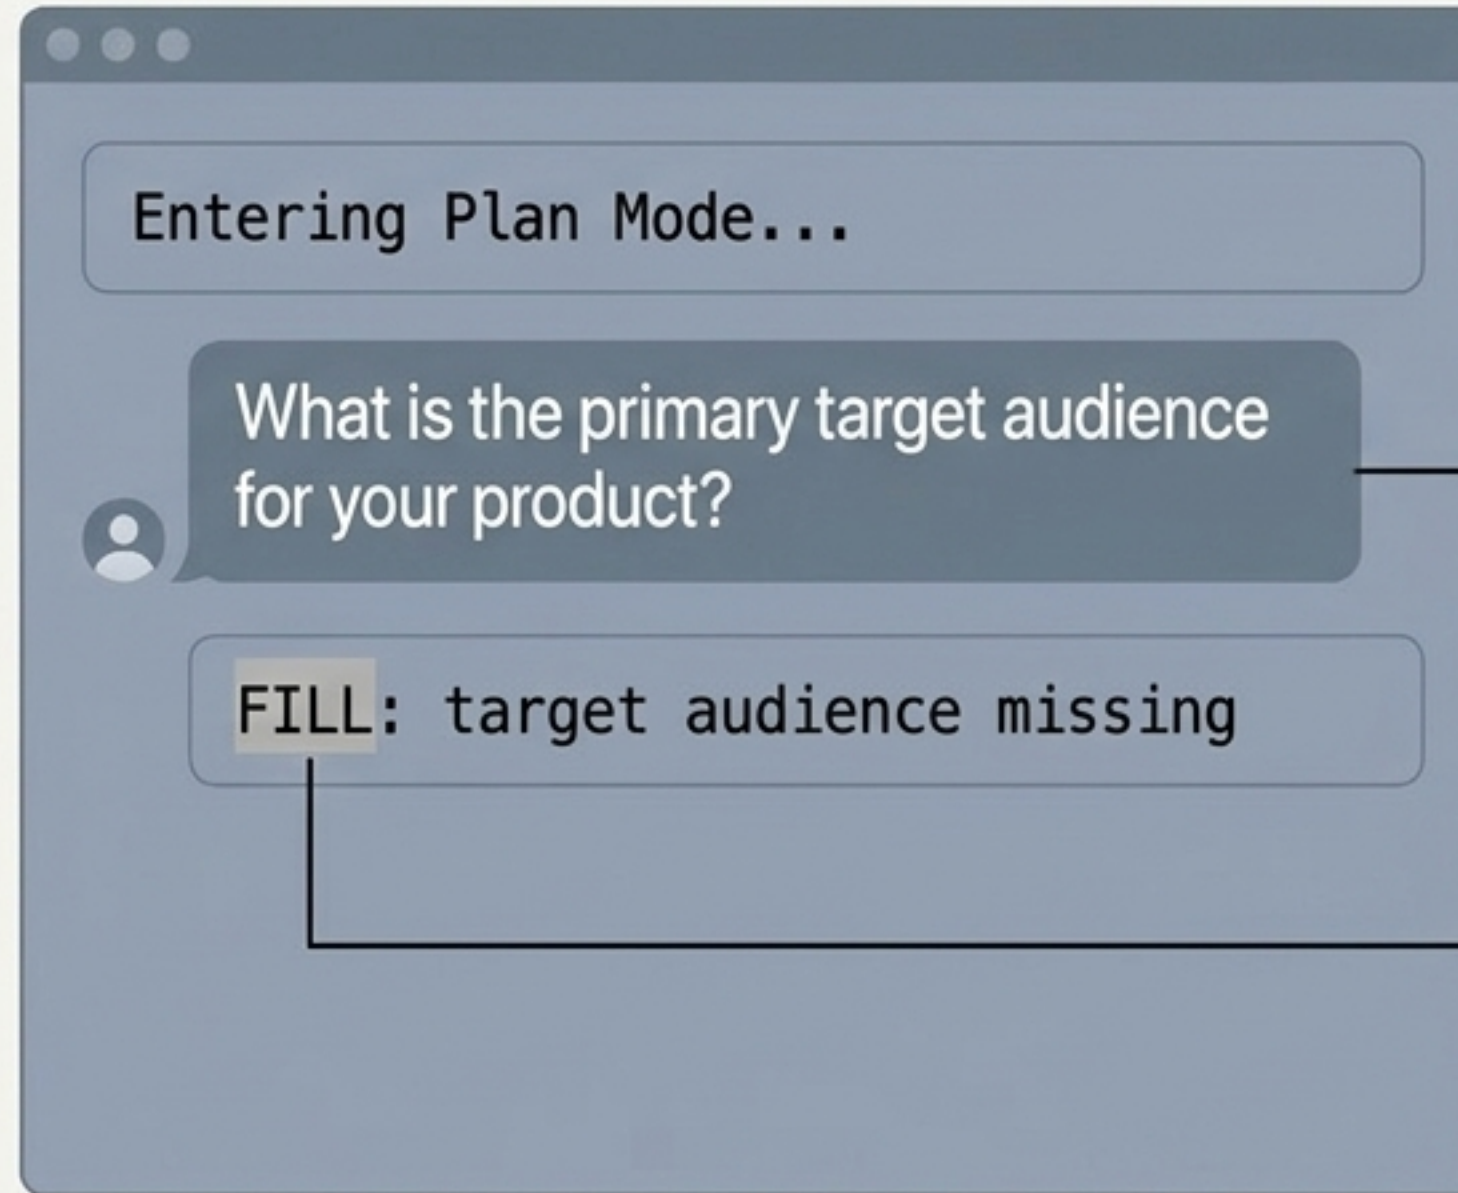

Pick your seat. We bring the tools to you.

Snow Gloves doesn't force you into a new interface. You pick your preferred agent. The product writes the skills and rules directly into that seat.

The onboarding interview.

The system learns about your company by interviewing you in your chosen runtime. It asks one decision at a time and notes gaps without hallucinating answers.

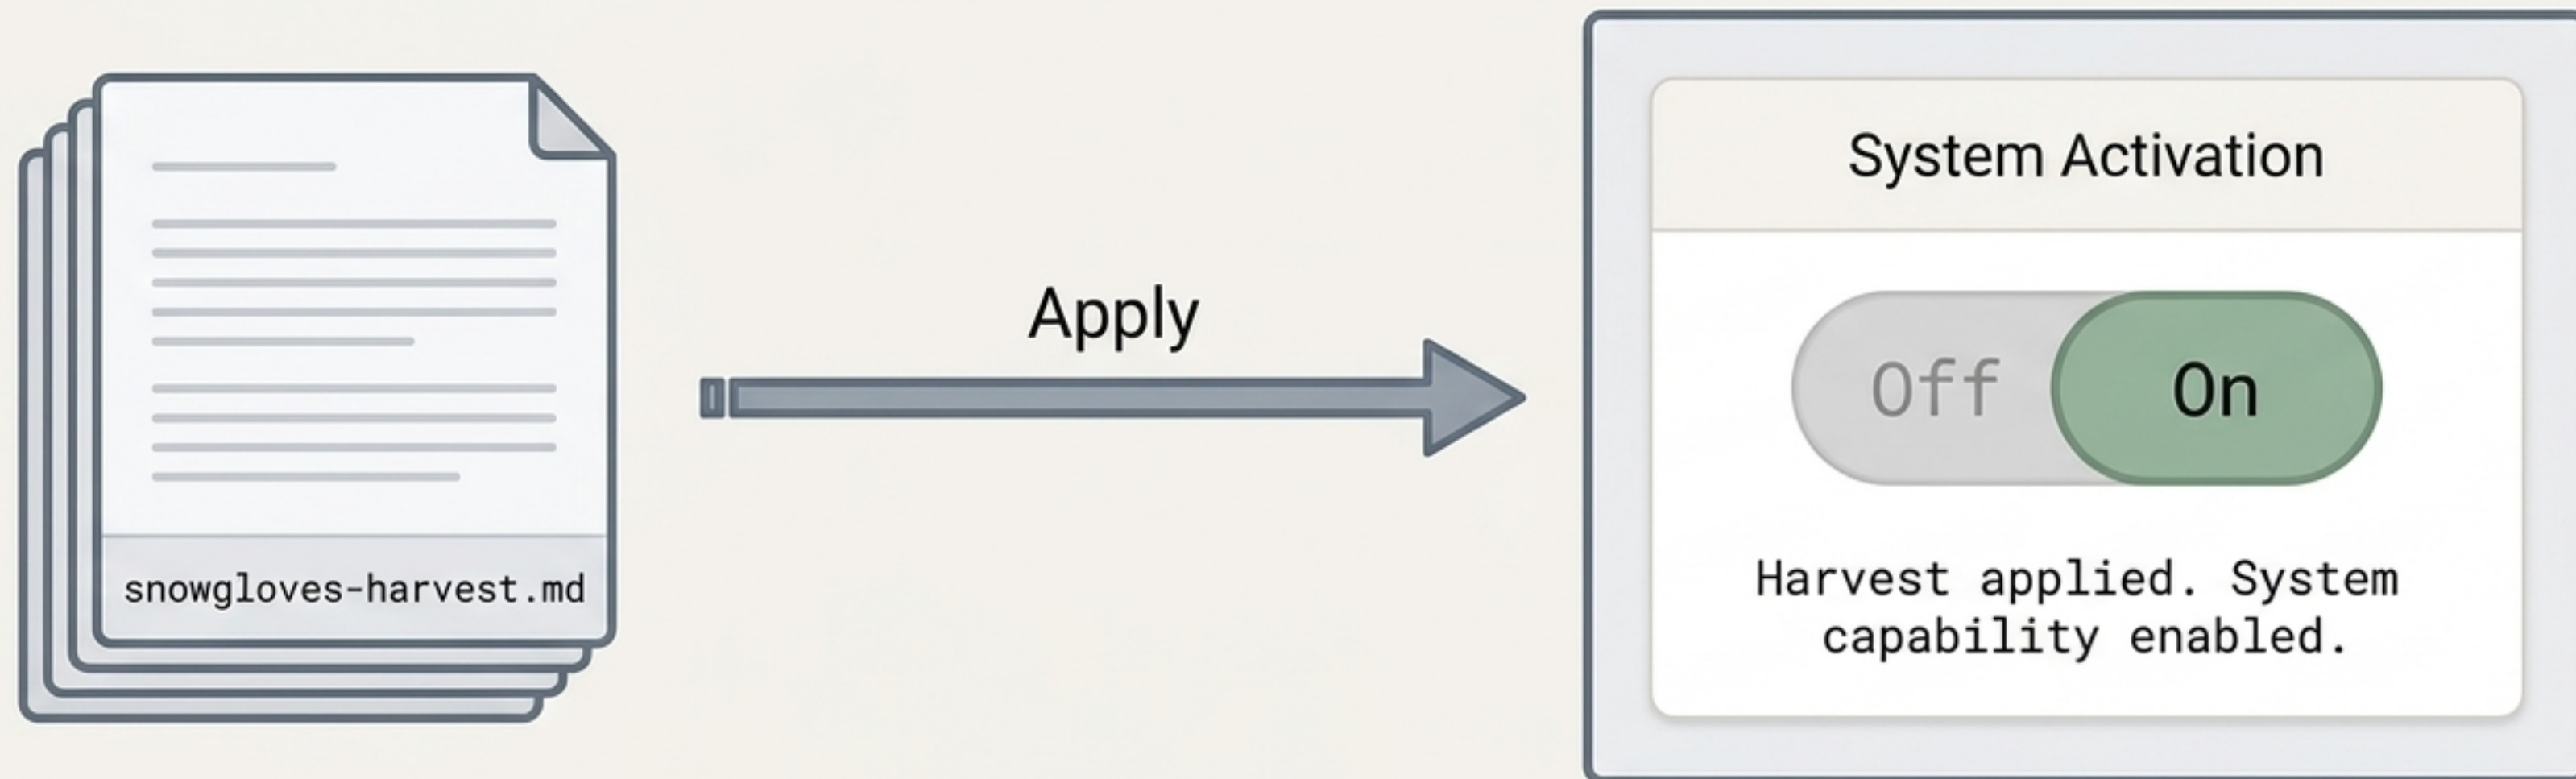

One question at a time. No guessing.

If a fact is missing, it writes FILL. It never makes up a fact.

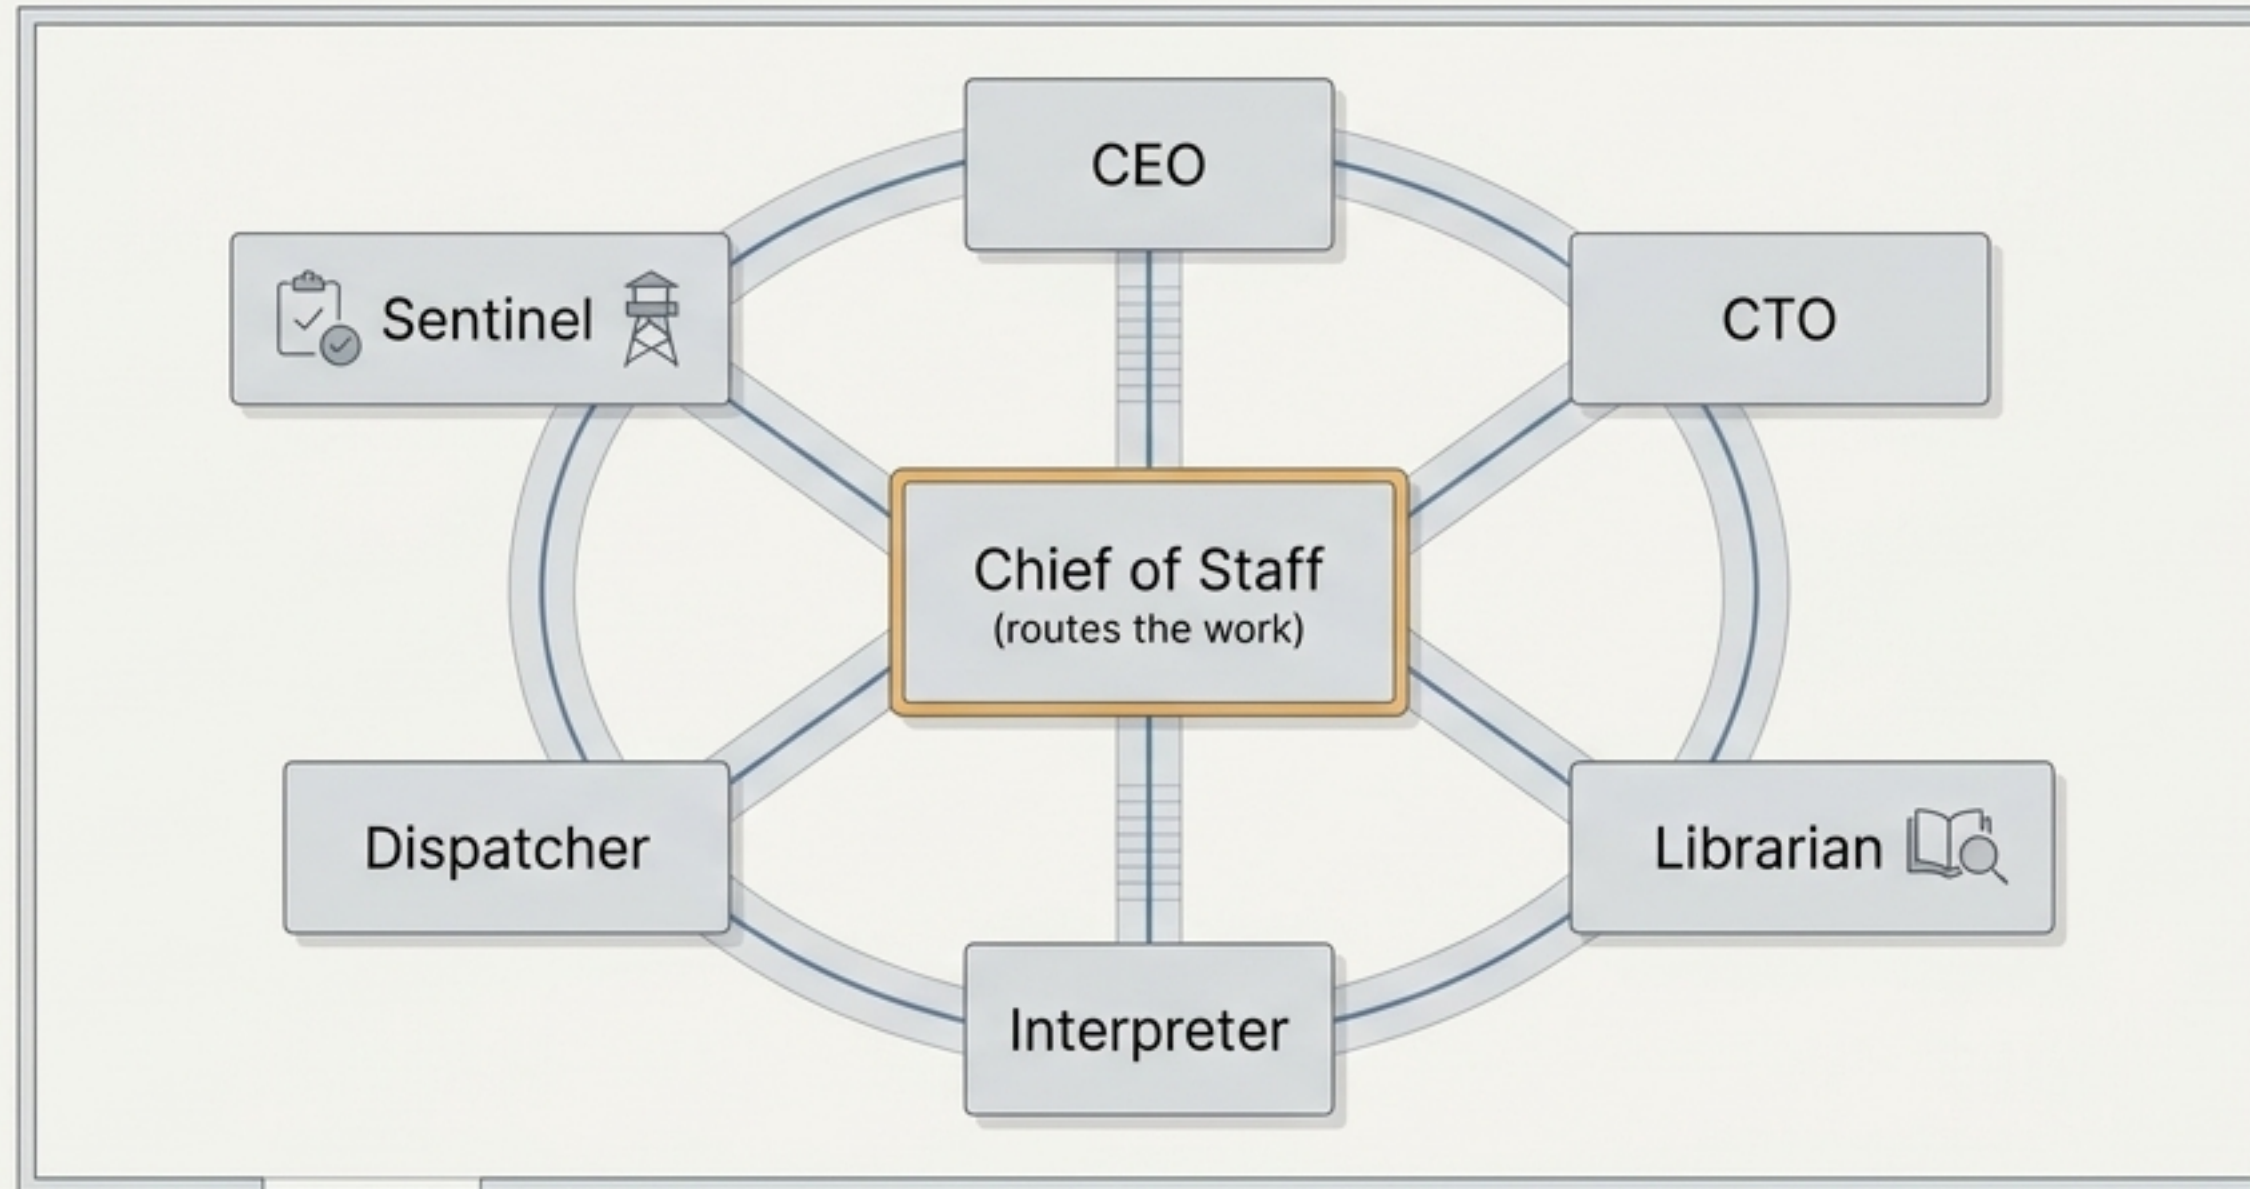

Turn answers into actions.

The interview generates a simple document: the Harvest. Apply it, and then enable just one card (an add or pointer) to get your system started.

Your new team.

Think of these as jobs, not software architecture.
They work together as one operations team to handle
events and decisions.

The Catalog: What you can turn on.

Add	Installs the skill for your team.
Pointer	Reference material (your host already provides it).
Hold	Visible, but waits for a founder's review. Cannot be turned on yet.
Refuse	Visible, but rejected. Cannot be turned on.

Risky sends always
wait for you.

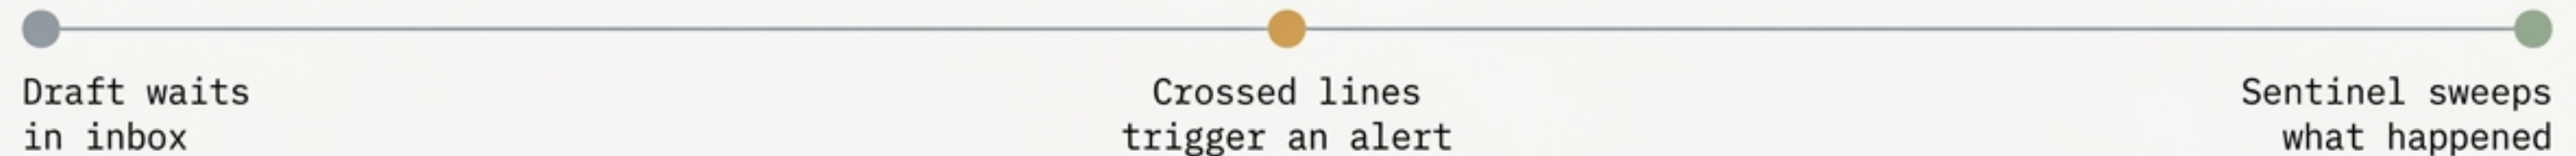

The Four Gates.

The system operates freely until it hits a boundary.
To pass, it requires one explicit "Yes" from you.

What a quiet week looks like.

You shouldn't be overwhelmed. Drafts sit patiently and wait for you. The system only speaks up if lines are crossed. At the end of the day, the Sentinel delivers a sweep of what happened.

Start with one job.

Don't turn everything on at once. Give your team one job today, and see how they do.
